

Journal of  
**TISSUE  
VIABILITY**

**CONTENTS**

- 
- Editorial** 4
- 
- Variations with age in the mechanical properties of human skin in vivo** 6  
This paper, first published in *Bedsore Biomechanics* in 1976, outlines an in vivo testing method for quantitatively assessing the viscoelastic properties of human skin.  
*H Alexander, T Cook*
- 
- The pathogenesis of skin wounds due to pressure** 12  
This paper, first published in *Bedsore Biomechanics* in 1976, describes the initiation and characteristics of three types of pressure wounds.  
*AA Barton*
- 
- Microvascular function at reduced flow rates** 16  
This paper, first published in *Bedsore Biomechanics* in 1976, outlines the microvascular reactions to reduced flow in human skin as observed by vital microscopy.  
*P-I Brånemark*
- 
- Microcirculatory reactions to controlled tissue ischaemia and temperature: a vital microscopic study on the hamster's cheek pouch** 19  
This paper, first published in *Bedsore Biomechanics* in 1976, investigates the early phase of recovery after an ischaemic insult to soft tissue.  
*EM Romanus*
- 
- A new instrument for predicting pressure ulcer risk in an intensive care unit** 21  
This paper outlines the mechanics of tissue response to mechanical loads acting on localised areas of skin and subcutaneous tissues.  
*Suriadi, H Sanada, J Sugama, B Thigpen, A Kitagawa, S Kinosita, S Murayama*
- 
- The NATVNS Scotland 2006 annual general meeting** 27  
A report of the AGM of the National Association of Tissue Viability Nurse Specialists (Scotland).  
*L McMath*
- 
- Product news** 28
